Programming - EViews

EViews' programming features allow you to create and store commands in programs that automate repetitive tasks, or generate a record of your research project. You may, for example, write a program containing commands that analyze the data from one industry, and then have the program perform the analysis for a number of other industries.

EViews Help: EViews Programming

Since an EViews program is a collection of commands, familiarity with the EViews command language is an essential part of programming. The command language may be split into four different groups in EViews. • General commands create, structure and manipulate workfiles (including importing and exporting data) and create workfile objects.

EViews Help: Simple Programs

This text, the EViews Command and Programming Reference, documents the use of com-mands in EViews, along with examples of commands for commonly performed operations, and provides general information about the command, programming, and matrix languages: The first chapter provides an overview of using commands in EViews: • Chapter 1.

EViews 10 Command and Programing Reference

This text, the EViews 7 Command and Programming Reference, documents the use of com-mands in EViews, along with examples of commands for commonly performed operations. provide general information about the command, programming, and matrix languages: The first chapter provides an overview of using commands in EViews: • Chapter 1.

EViews 5 Command and Programming Reference

Modeled loosely after the BASIC programming language but with object-oriented extensions and matrix handling capabilities, EViews allows you to enter individual commands for immediate or batch execution. Your programs can make use of looping and condition branching, as well as subroutine, macro, and string list processing.

Command Line and Programming Interface - EViews

There are two ways to estimate ARIMA models in EViews. First, you may generate a new series containing the differenced data, and then estimate an ARMA model using the new data. For example, to estimate a Box-jenkins ARIMA(1, 1, 1) model for M1 you can first create the difference series by typing in the command line:

EViews Help: Estimating ARIMA and ARFIMA Models in EViews

6 (8) Append a specification line to a model. To fill the model, you should use the append command for EACH equation. Object Proc: (object_name: here, 'example_model').append (equation) After input until this stage, if you run the program, then EViews will create a

A Guide to Basic Programming for Simulation with EViews ...

EViews 8's complete uninstall command line is C:\Program Files (x86)\InstallShield Installation Information\{1D78E62C-8585-446A-8FC7-2754332C0521}\setup.exe. EViews 8's main file takes about 20.23 MB (21209616 bytes) and its name is EViews8.exe. The executable files below are part of EViews 8.
