Make sure that the water pressure to the valve is at least 20 psi. If the water pressure is sufficient, use a multimeter to check for power to the water inlet valve. If the water inlet valve has sufficient pressure and is getting power, but the ice maker won't fill with water to make ice, replace the water inlet valve.

If your freestanding ice maker is not producing ice properly, the ice cutter grid assembly may need replacing. The cutter grid is located within the main unit of the ice maker and contains thin, heated wires that slice the ice into cubes that are then deposited in the ice bin. If the cutter grid is broken, ice can back up within the ice maker.
