Ladder logic (also known as ladder diagram or LD) is a programming language used to program a PLC (Programmable Logic Controller). It is a graphical PLC programming language which expresses logic operations with symbolic notation. Ladder logic is made out of rungs of logic, forming what looks like a ladder – hence the name ‘Ladder Logic’.

In drawing ladder diagrams the names of the associated variable or addresses of each element are appended to its symbol. Thus Figure 11.6 shows how the ladder diagram of Figure 11.5a would appear using (a) Mitsubishi, (b) Siemens, (c) Allen-Bradley, (d) Telemecanique notations for the addresses. Thus, Figure 11.6a indicates that this

Essentially, a single function block can take the place of an entire line of ladder logic. These blocks can be strung together to complete an entire program. Like ladder logic, function block diagrams are read left to right, top to bottom. We compared “AND” and “OR” logic function blocks with their ladder logic counterpart.

What is the Difference between Ladder Logic and Function ...

Programmable logic controllers can use “ladder logic” or “ ladder diagrams (LD),” which is a simplistic programming language included within the IEC-61131-3 standard that is well suited for industrial applications. Ladder logic gets its name from the legacy method of implementing discrete logic via electromechanical relays and was initially referenced as “relay ladder logic.”
