### Securing a RADIUS server | Network World

RADIUS secures a network by enabling centralized authentication of dial-in users and authorizing their access to use a network service. It manages remote user authentication, authorization and accounting (AAA).

### What is Remote Authentication Dial-in User Service (RADIUS ...

Remote Authentication Dial-In User Service (RADIUS) is a networking protocol, operating on port 1812, that provides centralized Authentication, Authorization, and Accounting (AAA or Triple A) management for users who connect and use a network service. RADIUS was developed by Livingston Enterprises, Inc. in 1991 as an access server authentication and accounting protocol and later brought into the Internet Engineering Task Force (IETF) standards.

### RADIUS - Wikipedia

The RADIUS server uses a shared secret for authentication purposes. Configure the RADIUS server with a strong password for the shared secret, and note that this will be used when configuring the DirectAccess server's client computer configuration for use with DirectAccess with OTP.
